

Chemours Acquires Operations of Southern Ionics Minerals (SIM)
Acquisition Will Enable Substantial Increase in Mineral Sands Production

Wilmington, Del., August 2, 2019 – The Chemours Company (Chemours) (NYSE: CC), a global chemistry company with leading market positions in titanium technologies, fluoroproducts and chemical solutions, today announced the acquisition of Southern Ionics Minerals, LLC (SIM), a minerals exploration and manufacturing company headquartered in Jacksonville, Florida. SIM was a wholly owned subsidiary of Southern Ionics Incorporated (SII), a privately held inorganic chemical manufacturer based in West Point, Mississippi.

SIM harvests and processes titanium and zirconium mineral sands from the same geological formation as those produced by Chemours at the company's existing mineral sands operation in Florida. The acquisition includes a mineral sands processing plant in Offerman, Georgia, an existing sand harvesting site in Charlton County Georgia, and administrative offices in Jacksonville, Florida.

"We are thrilled to add SIM's assets to the Chemours portfolio and are excited to welcome the dedicated, capable team responsible for operating these assets to the Chemours family," said Bryan Snell, president of the Titanium Technologies business for Chemours. "SIM has a tremendous track record that demonstrates their strong commitment to environmental stewardship and they are a good neighbor to the communities in which they operate. Their values of trust and integrity are closely aligned with our core value of unshakable integrity and our corporate responsibility commitments. We are proud to have SIM and its employees as part of our mineral sands harvesting business," said Snell.

Chemours has the unique capability of producing its Ti-Pure™ brand of titanium dioxide from a wide variety of mineral sands. In acquiring the SIM assets, the company will now have additional access to large, high-value ilmenite mineral sand deposits to produce titanium dioxide pigments. Having access to these internally produced materials delivers advantages for the business and provides a stable and predictable cost structure for customers, supporting the company's Ti-Pure™ Value Stabilization (TVS) strategy of investing in capacity-building and product innovation, while focusing on enhancing durable, value-oriented customer relationships. SIM will operate as a wholly-owned subsidiary of The Chemours Company.

Chemours has harvested mineral sands in Florida for more than 70 years with a strong reputation for responsible development. Snell said: "The outstanding environmental stewardship and strong local community support that has been the foundation of SIM's mineral sand operations in Georgia is an important marker of the synergy that exists between the two companies."

Stuart Forrester, president of SIM, said his company was "excited to join the Chemours family and help grow their heavy mineral harvesting business."

"We share many of the same values around safety and responsible operations as Chemours, and we look forward to greater benefits and opportunities for our employees as we become part of this outstanding organization," said Forrester.

Forward Looking Statements

This press release contains forward-looking statements, within the meaning of the safe harbor provisions of the U.S. Private Securities Litigation Reform Act of 1995, that involve risks and uncertainties. Forward-looking statements provide current expectations of future events based on certain assumptions and include any statement that does not directly relate to any historical or current fact. The words "believe," "expect," "will," "anticipate," "plan," "estimate," "anticipate," "target," "project," and similar expressions, among others, generally identify "forward-looking statements" which speak only as of the date the statements were made. These forward-looking statements may address, among other things, the outcome or resolution of any pending or future environmental liabilities, litigation and other legal proceedings or contingencies, anticipated future operating and financial performance, business plans and prospects, transformation plans, cost savings targets and plans to increase profitability, that are subject to substantial risks and uncertainties that could cause actual results to differ materially from those expressed or implied by such statements. Forward-looking statements are based on certain assumptions and expectations of future events which may not be accurate or realized. Forward-looking statements also involve risks and uncertainties which are beyond Chemours' control. Additionally, there may be other risks and uncertainties that Chemours is unable to identify at this time or that Chemours does not currently expect to have a material impact on its business. Factors that could cause or contribute to these differences include the risks, uncertainties and other factors discussed in our filings with the Securities and Exchange Commission, including our Annual Report on Form 10-K for the year ended December 31, 2018. Chemours assumes no obligation to revise or update any forward-looking statement for any reason, except as required by law.
